

# Cutting-edge Technology to Help Solve Your Cellular Connectivity Issues.

The leader in the cell signal amplifier market.

## How does it work?

The outside antenna will pick up on the faintest cell signal and brings it inside. The signal is received by the signal amplifier, and the improved cell signal is then rebroadcasted throughout the building.

## Why WilsonPro?

For over 20 years, WilsonPro has developed **scalable** and **cost-effective** solutions to solve cell connectivity problems. Our technology is **FCC certified**, as well as **approved by all U.S. carriers** and compatible with all cellular devices.

Ideal for any commercial space **5,000 to over 100,000 sq. ft.**, WilsonPro offers **remote management** tools to ensure customer satisfaction, and system design support for a customized installation.

The only company to design, assemble and test products in the **USA**— WilsonPro's technology is **guaranteed to work in a 5G world**.

## Applicable to all industries, including:

Healthcare

Education

Commercial

Manufacturing

Retail

Government
